## For Immediate Release

### **ELECTRONIC SANITARY PRESSURE SWITCH REDUCES INSTRUMENTATION COSTS WHILE IMPROVING SYSTEM RELIABILITY.**

Watertown, MA - United Electric Controls has added a new option to the popular ONE Series Electronic Switch product line, a 3-A approved, 316L stainless steel pressure sanitary sensor. Three discrete functions - switch, pressure gauge and transmitter are accomplished with ONE reliable and cost-effective instrument crucial in the processing and manufacturing of food, kindred products and pharmaceuticals. The Sanitary ONE is priced at \$595.

Offering the same benefits of the other ONE Series products, the Sanitary ONE continuously monitors and communicates its own health status both locally and remotely, assuring proper function when needed. While the product's local digital display and programmability make it simple to install, set up and test, its 4-20 mA trending capabilities can provide transmitter features at a price that's close to the cost of a switch.

The newest One Series product features a 1-1/2" or 2" sanitary sensor with welded 316L stainless steel diaphragm, and 3-A approved finish. The Sanitary ONE includes Neobee M-20 oil fill, and is suitable for clean-in-place applications.

Since 1931, United Electric Controls has been a leader in the development of innovative threshold detection and switching technology for the process and allied industries, and has maintained ISO 9001 certification since 1994. With corporate headquarters in Watertown, Massachusetts, USA, and direct offices throughout the USA, Canada, Europe, Australia, India and Malaysia, UE also supports worldwide distribution.
