ONE SERIES SMART TRANSMITTER-SWITCH FOR PRESSURE AND TEMPERATURE MONITORING

- NAMUR standard and HART®-enabled smart transmitter + programmable switch for process monitoring, alarm and shutdown
- Switch-only models replace mechanical switches for cost-effective upgrades using existing wires
- Display and keypad provide easy, fast and secure field programming while in service
- Programmable set point and deadband provides accurate and fast cycling for rotating equipment
- Worldwide hazardous location approvals included:
  - Ex
  - CE
  - UL
  - EEx

UE UNITED ELECTRIC CONTROLS
LEADERS IN SAFETY, ALARM & SHUTDOWN

HART COMMUNICATION PROTOCOL
DUAL SEAL CERTIFIED
RoHS compliant
ISO 9001 CERTIFIED COMPANY
OVERVIEW

United Electric Controls Company (UE) is recognized for high-quality products with innovative product design, and the One Series carries this 85-year tradition well beyond the electromechanical switches for which UE is known. UE’s One Series line of programmable electronic pressure and temperature products sets new standards for quality, reliability, and SIL capability.

The One Series provides explosion (flame)-proof, intrinsically safe and non-incentive models that monitor gage pressure, differential pressure or temperature. An advanced low-power microcontroller provides four SMART model platforms—

1. a NAMUR NE 43 standard and HART-enabled transmitter (1XTX00),
2. two discrete (digital input)-powered electronic switches (1XSW) that operate on the existing application’s 2 wires,
3. a transmitter-switch hybrid with two independent and programmable solid state relays (1XTXSW)
4. and a 4-wire switch that provides high-power switching for local control of loads directly and at the point of measure.

With no moving parts, these versatile instruments can be used in a wide variety of safety control, alarm and interlock applications (SCAI).

UE’s One Series is your best choice for tough applications with high cycle rates, severe shock or high vibration. For plant upgrades, the versatile powering options - analog loop, discrete input powered (VDC or VAC) and externally powered models offer options for soft or high capacity SPST alarm, trip or emergency shutdown.

With its integral digital display, the "fit for service" One Series effectively does the job of multiple instruments: transmitter, gauge, process switch, or trip alarm. The embedded logic and high diagnostic coverage means the One Series is a safer, smarter and less complex device than other sensor alternatives, delivering more value for price.

Companies should consider adding United Electric’s advanced technology One Series product line to their Acceptable Manufacturers List (AML) in appropriate pressure and temperature commodity classes such as Pressure/Temperature Indicating Transmitter, Digital Indicating Switch, and hybrid Transmitter-Switch.

AWARD-WINNING DESIGN

The One Series’ innovative design is recognized worldwide as the recipient of 3 prestigious engineering awards.

FEATURES

- Transmitter-only, switch-only and hybrid transmitter-switch models offer maximum flexibility
- Digital process display provides process conditions at a glance
- Programmable set point and deadband provides the most versatile, accurate and repeatable alarm and shutdown switching
- Configurable IAW™ self-diagnostics provide piece of mind that the instrument is functioning properly by communicating with the control system using a dedicated discrete output
- Plugged Port Detection annunciates a clogged sensor and a closed bypass valve
- Max/Min memory – samples and stores the highest and lowest extreme process values for process diagnostics and learning
- Nuisance trip filtering eliminates unwanted nuisance trips and unnecessary alarms
- Programmable trip delay – hold off the trip decision for tenths of seconds up to several minutes
- Trip counter – records trips for up to two relays for process diagnostics and learning
- 3-year warranty
POWER

Extremely low power consumption allows the One Series 2-Wire switch-only models (1XSW) to operate with no additional wiring or batteries. Power is obtained from the control system’s discrete input, making it ideal for plant upgrades from mechanical switches, re-using the same wiring and control schemes. The One Series 2-Wire provides a drop-in replacement for mechanical switches and a fast, easy and cost-effective means for plant upgrades.

For direct switching applications, loop-powered hybrid transmitter-switch versions of the One Series can provide 2 independent solid-state relays and handle loads up to 280 volts while providing a field-scalable 4-20 mA analog output – a switch + gauge + transmitter function all-in-one instrument with only one process connection. This reduces installation cost, potential leak paths and maintenance.

PROGRAMMABILITY VIA KEYPAD AND SMART-HART® 7
(included with 1XTX models)

Transmitter-only and hybrid Transmitter-Switch One Series models now feature HART® 7 compatibility. Any function that can be controlled with the keypad can also be controlled with a HART® communicator. This feature makes it unnecessary to remove the enclosure cover to make programming changes or access the MAX/MIN values, especially important in explosive environments. All programming functions can be performed remotely.

The set point and deadband settings allow for 100% adjustability, providing highly repeatable trip and reset points for many different applications. This feature allows the One Series to be used for pump and compressor cycling applications where high cycle rates may shorten the life of mechanical controls. Temperature monitoring models can provide highly repeatable thermostatic control of heaters and chillers. New software features in the One Series allow trip points to be filtered, delayed and counted. Plugged Port Detection can utilize MAX/MIN process extremes data to provide a powerful yet simple tool for detecting clogged impulse lines, rendering these application challenges manageable by the instrument, with no special programming needed at the PLC.

SELF-DIAGNOSTICS

Mechanical switches have no self-diagnostic capabilities — they are blind instruments. All One Series models include UE’s exclusive IAW™ (I Am Working) self-diagnostic system that detects faults before they become process monitoring problems. Detected faults are reported on the digital display while the set point switch will fail safe (change to the tripped state) and the 4-20 mA analog output will go to ≤ 3.6 mA to provide remote fault indication per the NAMUR standard. A separate IAW™ discrete output remains normally closed and will fail-safe-open if a fault is detected or if power is lost. By monitoring this output, the intelligent and configurable IAW™ diagnostics provide immediate remote indication that the One Series remains reliable and available to react to and report process conditions worthy of an alarm and/or shutdown.
APPLICATION VERSATILITY

For alarm and shutdown monitoring applications, there is no better choice than the One Series family of hybrid transmitter-switches from United Electric Controls. Measuring gage pressure, differential pressure or temperature, the extremely rugged and reliable One Series takes all of the guess-work out of monitoring process variables to prevent injury, loss and downtime.

With its large backlit digital display, fully adjustable deadband and 100% solid-state design, the One Series is the obvious choice for plant upgrades and new construction projects. A built-in microprocessor includes digital repeatability and intelligent IAW™ self-diagnostics, offering plant operators an extremely reliable and smart process and capital equipment protection device.

Proven in use in literally thousands of diverse applications, UE’s One Series is designed for harsh and hazardous location process monitoring with certificates available for intrinsically safe and explosion proof areas including cULus, ATEX and IECEx among others. See the Approvals and Ratings page for complete area classification details and temperature ratings.

Here are a few application examples:

• Pumps and compressors – start/stop, optimizing, shutdown, staging, fast PD pump switching

• Lubricating oil monitoring – seal oil pressure, sump temperature, bearing pressure, predictive maintenance

• Hydraulic oil pressure – high pressure monitoring, emergency shutdown, ram cycling

• Filter monitoring – automatic backwash, clog and change indication, proving flow

• Plant upgrades – power and wastewater plant upgrades, drop-in replacement for mechanical switches

Display visibility temperature range: 10°F (-12°C) to 158°F (70°C) all models

#### Long-term stability:

±0.25% of range/year maximum

#### Temperature drift:

0.03% of full scale per °C (0.12% for the P10 and K10 range)

#### Switch response time:

≤ 100 mS for detection of full step change and change of output state with Trip Delay and Filter turned off

#### Analog output response time:

250 mS maximum with FILTER set to OFF, pressure models only

#### Display response time:

400 mS (updated 2.5 times per second)

#### Filter (transient filtering to prevent nuisance trips):

Programmable time constants for 0.25*, 0.5*, 1, and 2 seconds, default OFF

#### Trip Delay (switch decision delay):

0 to 999.9 seconds in 1/10th second increments

*Pressure Models Only
Set 4 MA (scale the 4 mA output):
Programmable from -3 to 25% of the sensor's range, values are in the units of measure selected and are range dependent.

Set 20 MA (scale the 20 mA output):
Programmable from 50 to 110% of the sensor's range, values are in the units of measure selected and are range dependent.

IAW™ (I Am Working) Diagnostics:
Upon detecting a fault, the local display will show a fault code, the set point switch will change to the as-programmed tripped state, the normally-closed IAW™ Output switch will fail-safe-open and the NAMUR NE 43 standard 4-20 mA output will indicate ≤ 3.6 mA. See installation manual for a complete listing ofdetectable faults and codes.

**Set point & deadband:**
Programmable over the sensor's entire range

**Memory:**
Programming and data protected by non-volatile FRAM

**Effective transmission distance:**
2,000 feet (610 meters) at rated voltage for 1XSW models

**Sensors:**
- **Gage Pressure** - 316L stainless steel wetted parts, welded diaphragm, 1/2" NPT (female) process connection, micro-machined piezo-resistive strain gage silicon element, 0.25 ml silicone oil fill, maximum diaphragm displacement: 0.00053 inches.
  
  Maximum media temperature: -40 to 257°F (-40 to 125°C)

  Vacuum: All gage pressure sensors withstand deep vacuum with no calibration effects. For compound vacuum ranges, see page 8.

- **Differential Pressure** - 316L stainless steel, welded diaphragms, 1/4" NPT (male) process connections, piezo-resistive strain gage silicon element, silicone oil fill.
  
  Maximum media temperature: -40 to 257°F (-40 to 125°C)

- **Temperature** - 316 stainless steel 0.25" OD sheath containing a 100 ohm 4-wire platinum RTD element available with epoxy fill (local low temp) or powder fill (remote high temp). Media temperature limits:
  
  -328 to 1000°F, intermittent to 1100°F (-200 to 538°C, int. to 593°C) for TC, TH and TT ranges
  
  -40 to 500°F (-40 to 260°C) for TR and TL ranges

**EMI/RFI:**
Compliance to CE EMC requirements: EN 61000-6-2, EN 61000-6-4

**Emission:**
EN 61000-6-4 Class A

**Immunity:**
EN 61000-4-2 Immunity to Electrostatic Discharge
EN 61000-4-3 Immunity to Continuous Radiated Disturbances
EN 61000-4-4 Immunity to Electrical Fast Transients
EN 61000-4-5 Immunity to Surges
EN 61000-4-6 Immunity to Continuous Conducted Disturbances
EN 61000-4-11 Immunity to Voltage Dips and Interruptions

**Weight:**
4.5 - 6.0 lbs (2.0 - 2.7 kg) depending on sensor. Add 1.9 lbs. (0.9 kg) for option M041

**Shock:**
per MIL-STD-810G method 516.6 – when device is subjected to 15 g (10 mSec) and 40 g (6 mSec); 3 drops/axis

Effects: less than +/- 0.40% of range

**Vibration:**
per IEC 61298-3 (field and pipeline applications with high vibration level, 10-1000 Hz range, 0.014* displacement peak amplitude, 5 g acceleration amplitude)

Effects: less than +/- 0.40% of range

IMPORTANT: When ordering option M201 or M202, please observe the decimal point resolution for the range specified and provide the set point and deadband settings with the same number of decimal places as found in the sensor tables on the previous pages.

M270  Display units, degrees C for temperature models
M275  Display units, inches of water column
M276  Display units, bar or mbar
M277  Display units, kPa or MPa
M278  Display units, kg/cm2
M395  Flameproof compliance Ex d per Korea Occupational Safety and Health Agency (KOSHA)*
M406  Compliance per Russian EAC*
M444  Paper tag
M446  Stainless steel tag
M449  Mounting bracket for pipe or wall. Use part number 6361-704 if ordered separately. See page 12 for additional information.
M550  Oxygen service: Cleaned in accordance with ASTM G93
W073  1/2" NPT male compression fitting for use with all TL sensors, see page 11 for additional information
W074  1/2" NPT male union connector for use with all TR, TH and TC sensors
W081  Thermowell adapter - Adapts 3/8" Thermowell to 1/4" sensor sheath
W930  1/2" NPT male to G1/2 male adapter for use with gage pressure sensors P06-P20. Use part number 6361-762 if ordered separately.
W932  1/4" NPT female to G1/2 male adapter for use with differential pressure sensors K10-K13. Use part number 6361-763 if ordered separately (2 required)
6361-752 Replacement cover assembly

^Note: Four digits must be entered for each set point and deadband. Please refer to the display resolution chart on pages 8 & 9 for the correct number of decimal places allowed for the sensor range and units of measure selected.

**T3 for pressure sensor ranges P06, P08, and P10-P16 only. T5 for all other models. Specifications subject to change without notice.
**One Series Safety Transmitter** - Pressure and Temperature Transmitter-Switch

- Improve Availability with reduced nuisance trips
- Improve Uptime with safety diagnostics
- Improve Safety with SRO to ensure safety function
- Lower Inventory - a transmitter, switch and gauge in one
- Simplify Complex Safety Systems with SFF = 98.8%
- Reduce Migration Costs with backward and forward compatibility

**12 Series** – Electro-Mechanical Pressure and Temperature Switch

- Compact, cylindrical 316 stainless steel design
- Hermetically sealed micro-switch
- Explosion Proof; Div. 1, Zone 1 certified for hazardous locations
- Snap-acting belleville spring mechanism for maximum vibration resistance and set point stability
- Pressure ranges 1 to 12,500 psi;
- DP working pressure ranges 0 to 1200 psi;
- Temperature ranges -130° to 650°F
- Dual seal compliance to ANSI/ISA 12.27.01

**120 Series** – Electro-Mechanical Pressure and Temperature Switch

- Explosion-proof line of pressure, differential pressure, and temperature models with wide selection of ranges, sensors and pressure connections
- Div. 1, Zone 1 certified for hazardous locations
- Single or dual switch outputs
- Welded stainless steel diaphragm pressure sensor
- Internal or external set point adjustment

**TX200 Series HART® & ASIC Pressure Transmitter**

- Smart TX200H offers HART 7 communication and 4-20 mA output
- TX200H 10:1 range turndown helps reduce inventory
- ASIC based TX200 offers 4-20 mA output or 1-5 VDC or 0-10 VDC output
- Rugged 316 stainless steel construction, welded and hermetically sealed
- Div. 1, Zone 1 certified for hazardous locations
- Wide variety of process connections available for pressure ranges from 0 to 15 psi up to 0 to 25,000 psi

**Temperature Sensors**

Rugged RTDs and thermocouples for process and energy applications, available with Nema 4X and explosion-proof heads to match heat-trace, turbine, combustion, and stack-emission applications
RECOMMENDED PRACTICES AND WARNINGS

United Electric Controls Company recommends careful consideration of the following factors when specifying and installing UE pressure and temperature units. Before installing a unit, the Installation and Maintenance instructions provided with unit must be read and understood.

- To avoid damaging unit, proof pressure and maximum temperature limits stated in literature and on nameplates must never be exceeded, even by surges in the system. Operation of the unit up to maximum pressure or temperature is acceptable on a limited basis (e.g., start-up, testing) but continuous operation must be restricted to the designated adjustable range. Excessive cycling at maximum pressure or temperature limits could reduce sensor life.
- A back-up unit is necessary for applications where damage to a primary unit could endanger life, limb or property. A high or low limit switch is necessary for applications where a dangerous runaway condition could result.
- The adjustable range must be selected so that incorrect, inadvertent or malicious setting at any range point cannot result in an unsafe system condition.
- Install unit where shock, vibration and ambient temperature fluctuations will not damage unit or affect operation. When applicable, orient unit so that moisture does not enter the enclosure via the electrical connection. When appropriate, this entry point should be sealed to prevent moisture entry.
- Unit must not be altered or modified after shipment. Consult UE if modification is necessary.
- Preventative maintenance and periodic testing is necessary for critical applications where damage could endanger property or personnel.
- Electrical ratings stated in literature and on nameplate must not be exceeded. Overload on a switch can cause damage, even on the first cycle. Wire unit according to local and national electrical codes, using wire size recommended in installation sheet.
- Do not mount unit in ambient temp. exceeding published limits.

LIMITED WARRANTY

Seller warrants that the product hereby purchased is, upon delivery, free from defects in material and workmanship and that any such product which is found to be defective in such workmanship or material will be repaired or replaced by Seller (Ex-works, Factory, Watertown, Massachusetts. INCOTERMS); provided, however, that this warranty applies only to equipment found to be so defective within a period of 36 months from the date of manufacture by the Seller. Seller shall not be obligated under this warranty for alleged defects which examination discloses are due to tampering, misuse, neglect, improper storage, and in any case where products are disassembled by anyone other than authorized Seller’s representatives. EXCEPT FOR THE LIMITED WARRANTY OF REPAIR AND REPLACEMENT STATED ABOVE, SELLER DISCLAIMS ALL WARRANTIES WHATSOEVER WITH RESPECT TO THE PRODUCT, INCLUDING ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

LIMITATION OF SELLER’S LIABILITY

SELLER’S LIABILITY TO BUYER FOR ANY LOSS OR CLAIM, INCLUDING LIABILITY INCURRED IN CONNECTION WITH (I) BREACH OF ANY WARRANTY WHATSOEVER, EXPRESSED OR IMPLIED, (II) A BREACH OF CONTRACT, (III) A NEGLIGENCE ACT OR ACTS (OR NEGLIGENCE FAILURE TO ACT) COMMITTED BY SELLER, OR (IV) AN ACT FOR WHICH STRICT LIABILITY WILL BE IMPEPUTED TO SELLER, IS LIMITED TO THE “LIMITED WARRANTY” OF REPAIR AND/OR REPLACEMENT AS SO STATED IN OUR WARRANTY OF PRODUCT. IN NO EVENT SHALL THE SELLER BE LIABLE FOR ANY SPECIAL, INDIRECT, CONSEQUENTIAL OR OTHER DAMAGES OF A LIKE GENERAL NATURE, INCLUDING, WITHOUT LIMITATION, LOSS OF PROFITS OR PRODUCTION, OR LOSS OR EXPENSES OF ANY NATURE INCURRED BY THE BUYER OR ANY THIRD PARTY.
